Whether you're a student struggling with this topic or a teacher seeking resources, this guide aims to clarify the essentials of negative numbers and improve your mathematical skills.

Understanding Negative Numbers

What Are Negative Numbers?

Negative numbers are numbers less than zero, typically represented with a minus sign (-) in front of the number. They are used to denote values that are below a defined zero point, such as temperatures below freezing, depths below sea level, or debts in finance.

Examples of negative numbers include:

- 1
- 5
- 100
- 0.75

Key points:

- Negative numbers are located to the left of zero on the number line.
- They are the additive inverses of positive numbers.
- Used to represent loss, deficiency, or below-zero quantities in various contexts.

The Number Line and Negative Numbers

The number line is a visual tool that helps understand the position of negative numbers relative to positive numbers and zero.

Features:

- Zero is at the center.
- Negative numbers are positioned to the left of zero.
- Positive numbers are positioned to the right of zero.

This visual aid facilitates understanding operations involving negative numbers and their relationships.

Properties of Negative Numbers

Basic Arithmetic with Negative Numbers

Mastering operations with negative numbers is essential for solving various mathematical problems. Here are the key rules:

- Addition

- Adding a positive number increases the value: e.g., $3 + 4 = 7$.
- Adding a negative number decreases the value: e.g., $5 + (?3) = 2$.
- Adding two negative numbers results in a more negative number: e.g., $(?2) + (?3) = (?5)$.

- Subtraction

- Subtracting a positive number decreases the value: e.g., $5 ? 3 = 2$.
- Subtracting a negative number is equivalent to addition: e.g., $5 ? (?3) = 5 + 3 = 8$.

- Multiplication

- Positive $\times$ Positive = Positive (e.g., $3 \times 4 = 12$).
- Positive $\times$ Negative = Negative (e.g., $3 \times (?4) = (?12)$).
- Negative $\times$ Negative = Positive (e.g., $(?3) \times (?4) = 12$).

- Division

- Follows the same sign rules as multiplication:
- Positive $\div$ Positive = Positive.
- Positive $\div$ Negative = Negative.
- Negative $\div$ Negative = Positive.

Summary table:

Operation	Sign Rule	Example
Addition	Same signs: add and keep sign	$(?2) + (?3) = (?5)$
Subtraction	Subtracting negative: add	$5 ? (?3) = 8$
Multiplication	Sign rules as above	$(?3) \times 4 = (?12)$
Division	Same as multiplication	$(?12) \div 3 = (?4)$
