Understanding relationships is vital for capturing real-world data interactions accurately.

Keys and Identifiers

- Primary Key uniquely identifies an entity instance.
- Foreign Key links related entities together.

Proper use of keys ensures data integrity and supports efficient data retrieval.

Types of Data Models

Steve Hoberman categorizes data models into three main types, each serving different purposes:

Conceptual Data Model

- Focuses on high-level business concepts
- Uses simple diagrams to illustrate core entities and relationships
